

# HAYDEN HARKWRIGHT

Javascript developer, *Oakland, California*

# works

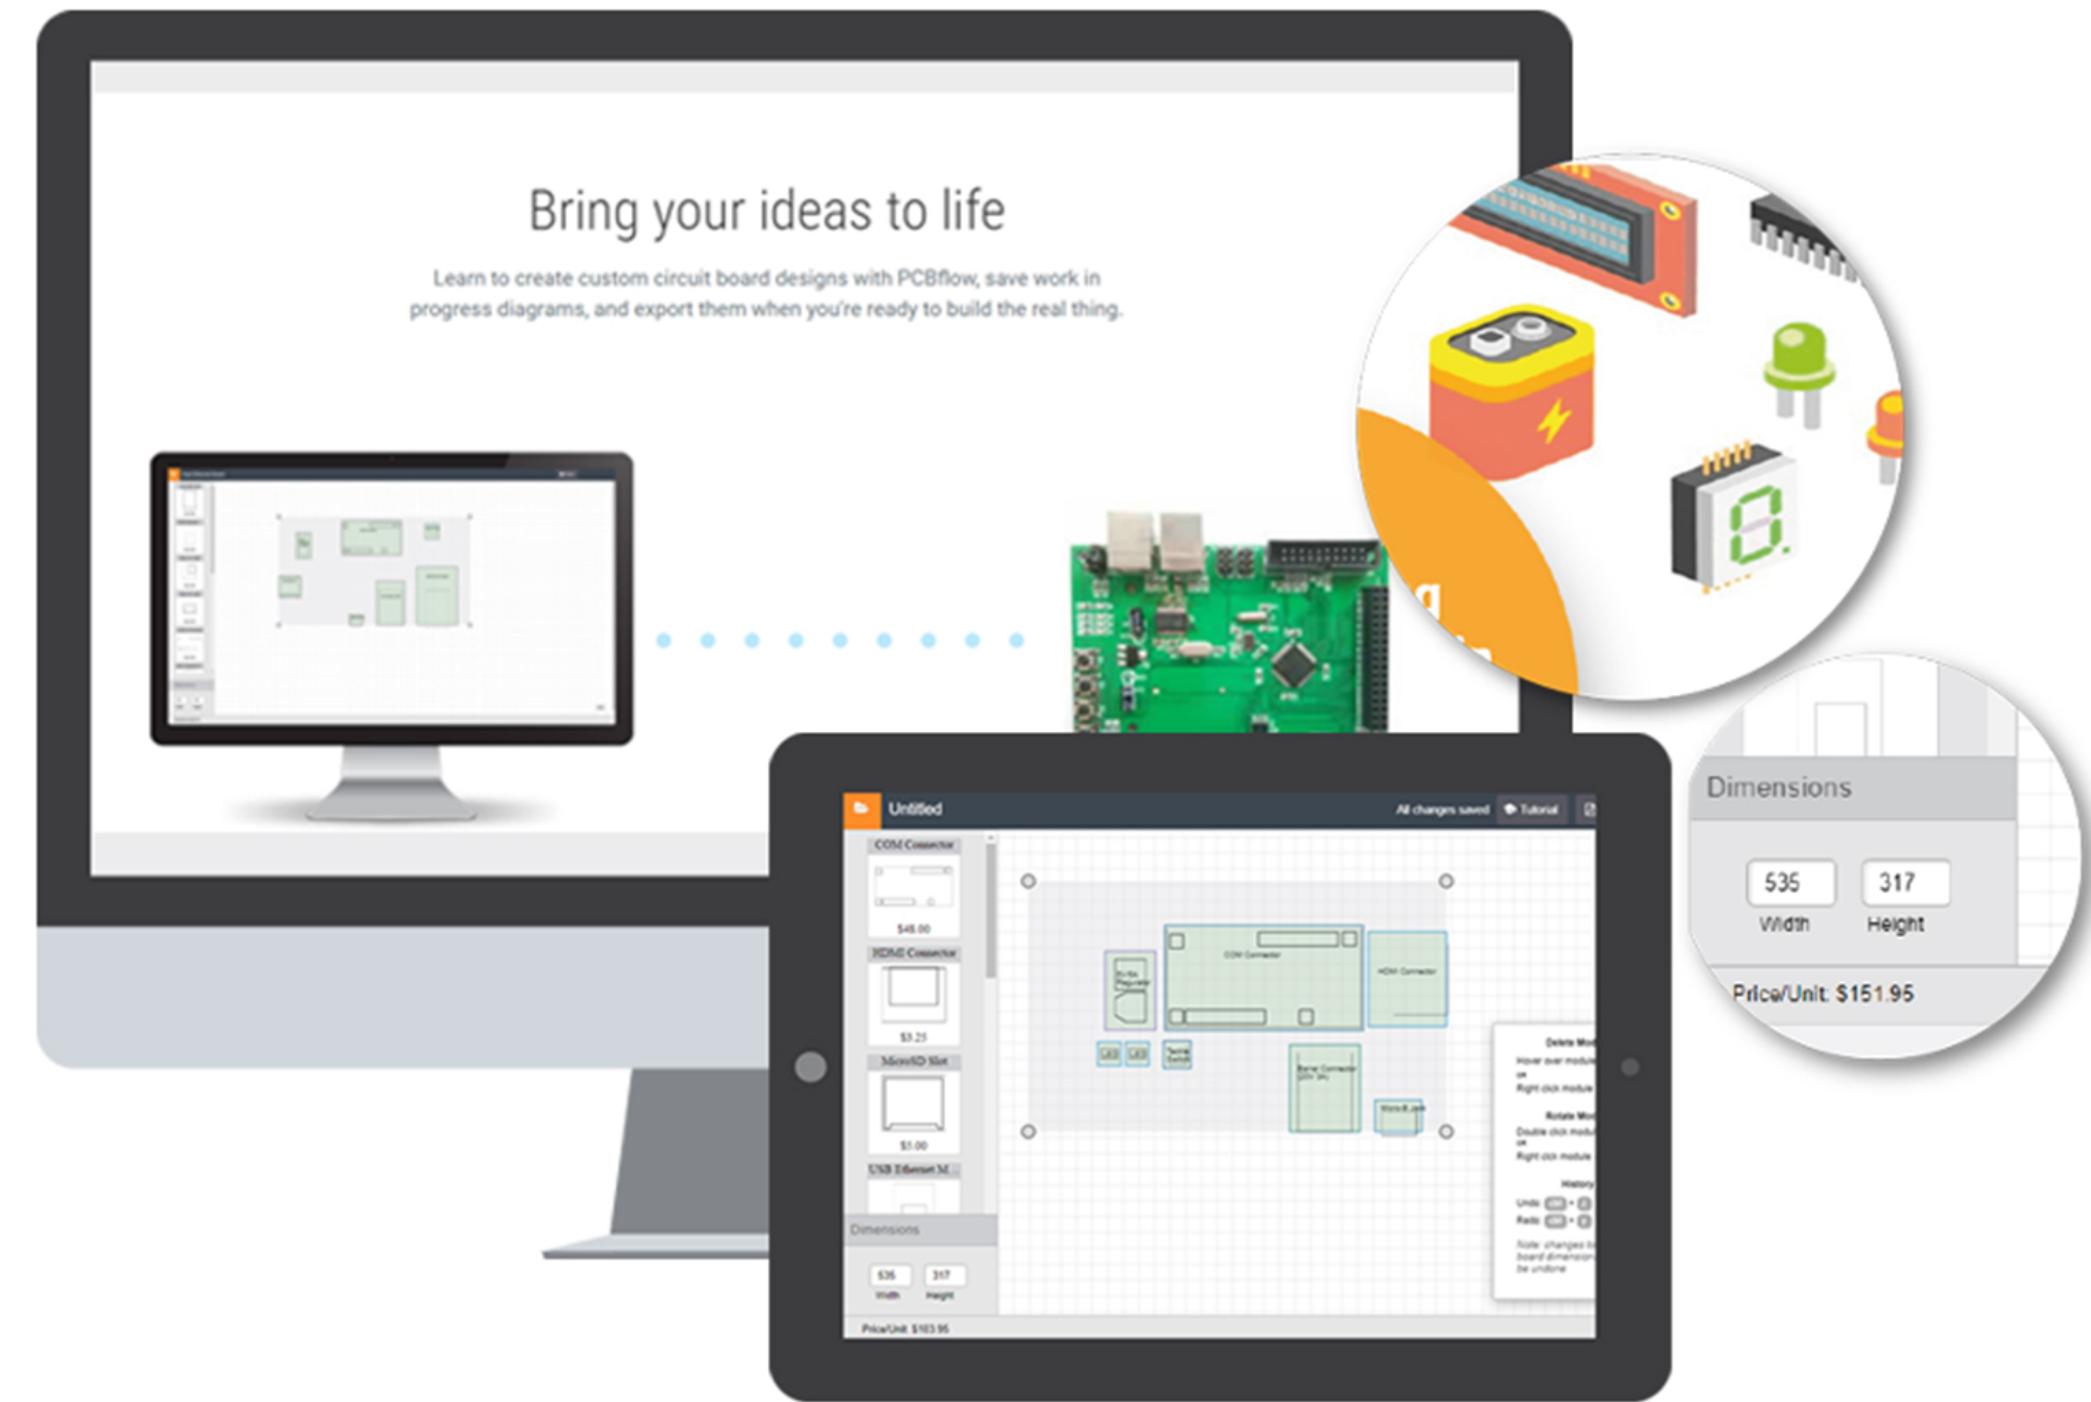

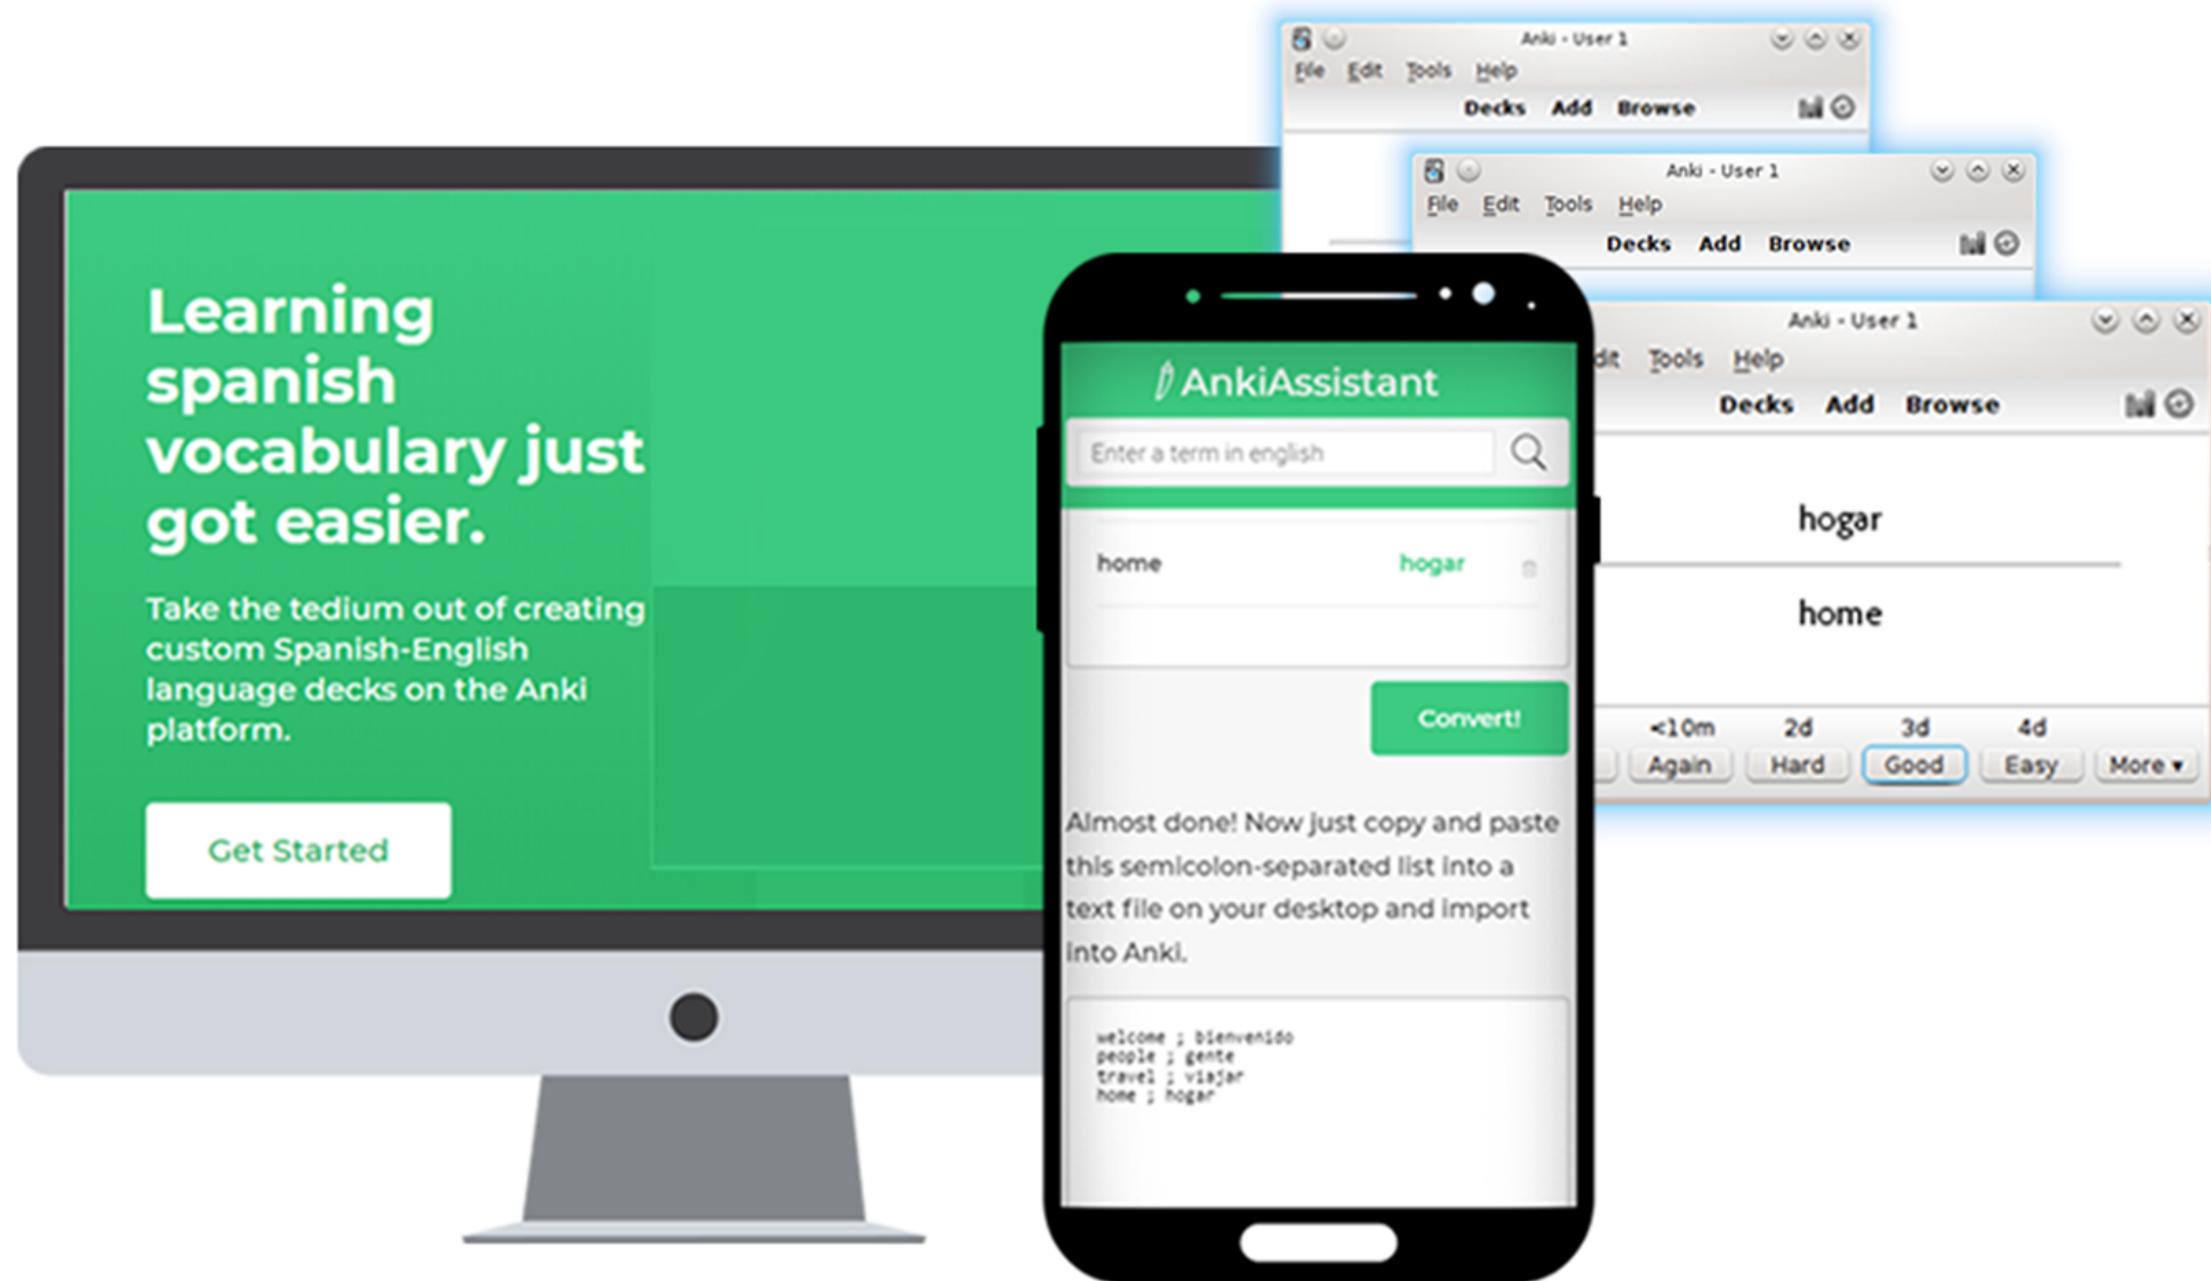

## Pomtracker

A pomodoro timer with integrated time tracking. I built this app with my own use in mind as I struggled to find existing tools for time tracking and the Pomodoro system that worked for me. I use this app every day to manage my pomodoro sessions and keep my weekly productivity goals on track.

# PCB Flow

A Drag and drop tool for designing electronic devices. Designed specifically to make electronics design accessible and approachable for non-engineers.

## AnkiAssistant

AnkiAssistant leverages the Globse language dictionary API to create a user interface that streamlines making custom Spanish language vocabulary flash card decks on Anki, the excellent spaced repetition based flash card platform.

# About me

I take great joy in finding ways to use programming to make life less tedious and more fun. I also earnestly look forward to putting web software to use to make meaningful improvements in the quality of other's lives and ending suffering in the world. Aside from my true obsession with coding, I'm also into rock climbing, meditation, and sipping on tasty microbrews.  
Let's work together. <3 xoxo
